PROFESSIONAL SUMMARY

DevOps Engineer with 4+ years of experience building and operating production-grade Kubernetes (Amazon EKS) platforms on AWS for large-scale microservices. Skilled in Terraform, Docker, Helm, Jenkins, ArgoCD, and GitOps-driven CI/CD, with deep observability expertise across Prometheus, Grafana, Thanos, OpenTelemetry, Jaeger, and the ELK Stack. Proven in DevSecOps, automation, and incident management, delivering highly available, scalable, and secure cloud-native systems.

PROFESSIONAL EXPERIENCE

DevOps Engineer | Neosoft Technologies

Sep 2025 – Present

- Architected and managed highly available **AWS EKS** clusters for large-scale microservices, administering Kubernetes workloads (Deployments, StatefulSets, DaemonSets, Services, HPA, PVCs, Secrets) with **Helm** for 99.9% uptime.
- Implemented **GitOps** with **ArgoCD** (auto-sync, self-healing, rollback) and built **Jenkins CI/CD** and **AWS Lambda CD pipelines** with **Docker** and **Bash** automation, cutting release time ~60%.
- Automated AWS infrastructure provisioning with **Terraform** (IaC) for EKS, EC2, IAM, ECR, VPC, Route 53, ALB, EFS, RDS, and CloudWatch.
- Designed a centralized logging pipeline (**Fluent Bit** → **Kafka** → **Kafka Connect** → **Elasticsearch** → **Kibana**) with EFS-backed buffering for high-throughput aggregation and analytics.
- Deployed and administered **Apache Kafka** clusters with broker scaling, rack awareness, pod anti-affinity, partitioning, replication tuning, ACLs, and secure authentication.
- Built observability using **kube-prometheus-stack** (Prometheus, Grafana, Alertmanager HA) and **Thanos** with a **Grafana PostgreSQL (RDS)** backend and remote-write across dev, UAT, and test clusters.
- Configured **Prometheus** service discovery, scraping, recording/alerting rules, and exporters, with an end-to-end alerting pipeline (**Prometheus** → **Alertmanager** → **Grafana** → **email**).
- Developed advanced **Grafana** dashboards integrated with **Keycloak** SSO and **RBAC** for secure, role-based observability across teams.
- Implemented distributed tracing using **OpenTelemetry (OTel)** and **Jaeger** for end-to-end request visibility across microservices.
- Integrated **SonarQube** quality gates and **Trivy** image scanning into CI/CD, and performed container and Kubernetes security hardening with RBAC enforcement.
- Configured **Cilium CNI** networking, ingress controllers, DNS, service discovery, SSL termination, and network policies for secure cloud-native networking.
- Managed persistent storage (**AWS EFS**, PVC resizing, StorageClasses) and databases (**MySQL**, **PostgreSQL**, **AWS RDS**), and built **Airbyte** → **ClickHouse** pipelines plus **OpenKM** for document management.
- Led production support and **incident management** across Kubernetes, CI/CD, Kafka, and ingress — resolving pod crash loops, a **Helm ErrImagePull** on kube-webhook-certgen, and an **ALB/CloudFront** 403 fix.

DevOps Engineer | Delfine India Technology

Mar 2024 – Aug 2025

- Automated AWS provisioning (**EC2**, **VPC**, **S3**, **IAM**, **Route 53**, **CloudWatch**, **KMS**, **Lambda**) with **Terraform**, reducing manual effort by ~70%.
- Designed secure **VPC** architectures with subnets, NAT gateways, Security Groups, and NACLs for strong isolation.
- Built **Jenkins CI/CD pipelines** with builds, testing, **SonarQube** scans, **Trivy** checks, and **Docker** image creation.
- Managed **Amazon ECR** as a centralized container registry with lifecycle policies, integrated into CI/CD.
- Administered **EKS** clusters with **Kyverno** policies, **HPA/VPA** auto-scaling, and **Blue-Green/Canary** deployments for zero downtime.
- Implemented a hub-and-spoke **ArgoCD GitOps** model for automated multi-cluster EKS deployments, reducing drift.
- Deployed a full observability stack (**Prometheus**, **Grafana**, **Fluent Bit**, **ELK Stack**, **Jaeger**) for monitoring, logging, and tracing.
- Enforced **DevSecOps** governance using **SonarQube** for code quality and **Nexus** for secure artifact management.
- Automated operational workflows using **Bash** and **AWS Lambda**, improving consistency and reducing manual tasks.
- Used **Git/GitHub** for version control and collaborated cross-functionally on scalable **DevOps** and **Kubernetes** solutions.
- Configured **NGINX ingress controllers** with SSL/TLS termination and path-based routing for secure external access to Kubernetes services.
- Enforced data security and access governance using **AWS KMS** encryption and **IAM** least-privilege policies across cloud resources.

DevOps Engineer | BYJU'S

Sep 2023 – Feb 2024

- Provisioned multi-environment AWS infrastructure using **CloudFormation** for repeatable, auditable deployments.
- Deployed containerized apps on **Amazon ECS (Fargate)** behind **ALB** with **CloudFront** for global content delivery.
- Automated **Blue/Green** ECS deployments with **Bitbucket Pipelines** and **AWS CodeDeploy** for zero downtime.
- Managed **Amazon ECR** for secure image storage, lifecycle policies, and CI/CD integration.
- Developed event-driven serverless APIs with **API Gateway** and **AWS Lambda (Python)** for cost-efficient microservices.
- Implemented **SNS** and **SQS** for asynchronous microservices communication and scalability.
- Configured **Amazon RDS (MySQL)** with **AWS Secrets Manager** for automated credential rotation.
- Automated operational workflows and data processing using **Python** and **Lambda** functions.
- Established monitoring and alerting with **CloudWatch** for ECS, Lambda, and API Gateway metrics.
- Secured apps with IAM least-privilege, ACM SSL/TLS, CloudFront OAI, **AWS WAF** (SQLi/XSS, rate limiting, DDoS), and **Route 53** failover routing.
- Used **Bitbucket** for source control with pull requests and code reviews, streamlining team collaboration and CI/CD integration.
- Optimized **ECS** task definitions, service auto-scaling, and container resource allocation to improve performance and reduce operational costs.

DevOps Engineer | Publicis Sapient

Mar 2022 – Apr 2023

- Automated infrastructure provisioning with **Terraform** and **Ansible** using version-controlled IaC.
- Developed and optimized **Jenkins CI/CD pipelines** with builds, unit tests, **SonarQube** gates, and security scans.
- Implemented a **Canary** deployment strategy on Kubernetes using **Helm** charts for zero-downtime releases.
- Managed containerized microservices with **Docker** and **Kubernetes** in isolated namespaces for environment segregation.
- Enhanced observability with **Prometheus**, **Grafana**, **ELK Stack**, **New Relic** for metrics, alerts, and root-cause analysis.
- Enforced **DevSecOps** using **SonarQube** for code quality and **HashiCorp Vault** for secrets management.
- Optimized **AWS cost** and resource utilization through lifecycle policies, right-sizing, and dashboards.
- Collaborated with cross-functional teams to troubleshoot deployment, infrastructure, and application issues across dev and production.
- Used **Git** for version control, enabling collaboration through pull requests and code reviews.
- Participated in **Agile** ceremonies and continuous improvement, recommending automation and infrastructure optimizations.
- Integrated **New Relic APM** for application performance monitoring, transaction tracing, and proactive bottleneck detection.
- Implemented automated rollback and health-check mechanisms in CI/CD pipelines to ensure reliable, zero-downtime releases.

TECHNICAL SKILLS

Cloud Platforms: AWS (EKS, EC2, VPC, IAM, ECR, RDS, Lambda, S3, Route 53, CloudFront, WAF, KMS, CloudWatch, EFS, SQS, SNS, ALB, CloudFormation, Secrets Manager), Azure

Containers & Orchestration: Docker, Kubernetes (Amazon EKS), Helm, Cilium, Kyverno, HPA, VPA

IaC & CI/CD / GitOps: Terraform, CloudFormation, Ansible, Jenkins, GitHub Actions, Bitbucket Pipelines, ArgoCD, AWS CodeDeploy, Maven, Nexus, Git

Monitoring & Observability: Prometheus, Grafana, Alertmanager, Thanos, OpenTelemetry, Jaeger, ELK Stack, Fluent Bit, Loki, New Relic, Datadog, CloudWatch

Data & Streaming: Apache Kafka, Kafka Connect, Airbyte, ClickHouse, Elasticsearch, Kibana, OpenKM, SQS, SNS

Security & DevSecOps: SonarQube, Trivy, AWS WAF, IAM, Secrets Manager, HashiCorp Vault, KMS, Keycloak, Kyverno, ACM

Databases & Networking: MySQL, PostgreSQL, Amazon RDS, DynamoDB | VPC, NAT Gateway, Security Groups, NACLs, Route 53, NGINX, Ingress, SSL/TLS

Programming & Tools: Python, Bash, YAML, Groovy | Jira, Confluence, Git, Agile / Scrum

EDUCATION

B.Tech, Computer Science Engineering

Jul 2017 – Jul 2021

Vishwakarma Institute of Information Technology, Pune, Maharashtra | CGPA: 7.57 / 10
