

Yogesh Rathod - DevOps Engineer

8208907311 | yogeshrathod6167@gmail.com | Pune | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

DevOps Engineer with 3.2 years of experience in designing, automating, and managing scalable cloud-native infrastructures. Expertise in AWS, Terraform, Kubernetes, Docker, and CI/CD pipeline automation. Skilled at integrating DevSecOps, observability, and GitOps practices to deliver highly available, secure, and cost-efficient systems. Adept at collaborating with cross-functional teams to align cloud strategies with business goals and drive continuous improvement across environments.

PROFESSIONAL EXPERIENCE

DevOps Engineer | Delfine India Technology Pune, IN | March-2024 – Present

Key Roles & Responsibilities:

- Automated provisioning of AWS infrastructure using **Terraform**, achieving fully reproducible, secure, and scalable deployments across environments.
- Designed **VPC architectures** including subnets, NAT gateways, route tables, and private endpoints to ensure strong isolation, compliance, and controlled access.
- Built **end-to-end CI/CD pipelines** in Jenkins integrating **SonarQube**, **Trivy**, and **Nexus** for code quality validation, vulnerability scanning, and artifact versioning.
- Managed **EKS clusters** with **Kyverno** policies, **HPA/VPA auto-scaling**, and implemented **Blue-Green/Canary** strategies to maintain zero-downtime rollouts.
- Adopted **GitOps** practices using **ArgoCD**, orchestrating multi-cluster EKS deployments through a hub-and-spoke model to achieve centralized automation and governance.
- Deployed full observability stack with **Prometheus**, **Grafana**, **Fluent Bit**, **ELK**, and **Jaeger**, improving alert accuracy and reducing MTTR (Mean Time to Resolution).
- Automated recurring operational workflows using **Bash** and **AWS Lambda**, minimizing manual intervention and improving overall system reliability.
- Managed AWS services such as **EC2**, **S3**, **IAM**, **CloudWatch**, **Route53**, and **KMS** for cost efficiency, performance optimization, and security compliance.

DevOps Engineer | BYJU'S Pune, IN | Oct-2023 – Feb-2024

Key Roles & Responsibilities:

- Provisioned **AWS infrastructure** using **CloudFormation templates**, ensuring secure, scalable, and repeatable deployments across staging and production environments.
- Designed **multi-stage Dockerfiles** and implemented **automated CI/CD pipelines** using **AWS CodePipeline**, **CodeBuild**, and **CodeDeploy** to streamline container-based application releases.
- Developed and deployed **serverless APIs** via **API Gateway** and **AWS Lambda (Python)** for event-driven processing and reduced compute costs.
- Configured **Amazon RDS (MySQL)** integrated with **Secrets Manager** to enable automated credential rotation and improve database security posture.
- Implemented asynchronous workflows using **SNS** and **SQS**, enhancing inter-service communication and scalability of microservices.
- Configured monitoring and alerting in **CloudWatch** for ECS, Lambda, and API Gateway, providing full operational visibility and proactive performance tracking.
- Applied AWS best practices with **IAM least-privilege**, **CloudFront OAI**, **ACM SSL/TLS**, and **signed URLs** to secure content delivery pipelines.
- Managed **Route53** for automated DNS failover, routing, and domain management while optimizing **S3 storage lifecycle policies** for cost savings.

Key Roles & Responsibilities:

- Automated **infrastructure provisioning** and configuration management using **Terraform** and **Ansible**, ensuring version-controlled and consistent IaC deployments.
- Developed optimized **Jenkins pipelines**, integrating build automation, security scans, and automated deployment workflows to enhance delivery speed and code reliability.
- Implemented **Canary deployments** on **Kubernetes** via **Helm charts**, minimizing downtime and improving service resilience.
- Managed and maintained **containerized microservices** across Kubernetes namespaces to ensure workload segregation and scalability across environments.
- Enhanced observability using **Prometheus**, **Grafana**, **ELK**, and **New Relic**, achieving real-time insights, alerts, and performance metrics visualization.
- Integrated **SonarQube** for static code analysis and **HashiCorp Vault** for secure secrets management within the CI/CD ecosystem.
- Conducted **AWS cost optimization** and implemented lifecycle management policies, reducing infrastructure costs by automating unused resource cleanup.
- Participated in **Agile ceremonies**, collaborating closely with developers and testers to propose automation enhancements and streamline release cycles.
- Managed repositories and branching strategies in **Bitbucket**, enabling smooth collaboration and streamlined release workflows.

EDUCATION**B.Tech – Computer Engineering | Vishwakarma Institute Of Information Technology, Pune | 2021 | 7.57CGPA****KEY SKILLS****Cloud Platforms:** AWS, Azure**Infrastructure as Code:** Terraform, CloudFormation, Ansible**Containers & Orchestration:** Docker, Kubernetes (EKS, Helm), ArgoCD**CI/CD Tools:** Jenkins, GitHub Actions, Bitbucket Pipelines, AWS CodePipeline, CodeBuild, CodeDeploy**Monitoring & Logging:** Prometheus, Grafana, Datadog, New Relic, ELK Stack, Loki, Jaeger**Security & DevSecOps:** SonarQube, Trivy, HashiCorp Vault, IAM, KMS, Secrets Manager**Scripting & Automation:** Shell, Python, AWS Lambda**Networking & Delivery:** Route53, CloudFront, ALB/ELB, VPC, Nginx**Databases:** RDS, DynamoDB, MySQL, Elasticsearch**Version Control & Collaboration:** Git, Bitbucket, GitHub, Jira, Confluence**TRAINING/COURSES****AWS DevOps Engineer Training | Irise Software Institute**
